

SARTIN SERVICES, INC.

**Introduces the MAB® Stretcher Conversion System
For Mass Casualty Transport**

Sartin Services is the Nation's Leader in Mass Casualty Emergency Response.

Sartin MAB® units are known by many labels:

Medical Ambulance Buses (MAB®), Evacuation Buses, and Ambulance Buses to name a few.

The fact is: Sartin MAB® units have responded to hundreds of mass casualty events and evacuations across the country and have transported thousands of patients. Sartin Services provides a choice to emergency response agencies when budgets may be limited but emergency response and evacuation needs are high. We design all of our units to help emergency responders do their job better.

To assist some government agencies whose budgets are shrinking, Sartin Services has developed a lower cost stretcher conversion system that gives emergency responders a way to provide a mass casualty evacuation when available funds are limited.

Our new conversion system, featuring our patented sliding stretcher system, allows a myriad of vehicles and environments to have a stacked stretcher system assembled and in place within hours. They are:

- Motor homes
- City buses
- School buses
- Trains
- Subway cars
- Boats
- Planes
- Free-standing buildings

**Disasters will not wait for you
to unpack a crate and assemble
a stretcher system in a vehicle.**

CONVERSION AND INSTALLATION

A Sartin Services stretcher conversion system is suggested for **dedicated buses only!** We do not advocate the removal and reinstallation of school bus seats. This takes too much valuable time during an emergency or disaster. Additionally, many school districts and government agencies may question the potential liability if school bus seats are reinstalled incorrectly. Sartin Services recommends that you convert a vehicle with permanent status.

Sartin Services offers two installation options:

- 1) We will ship you a complete conversion system with everything you need to do it yourself.
- 2) Our highly trained installers will come to you and provide a certified installation.

Sartin Services products embody unprecedented experience in designing mass casualty vehicles crafted through real world experience gained from having vehicles in service throughout America.

For more information on a Sartin Services MAB® Conversion System, contact us today.

FEATURES

The Sartin MAB® Conversion System has the same patented sliding stretcher system found in our MAB® buses. Responders will appreciate the ease and safety this system offers in loading and unloading patients.

- The sliding stretchers lock into position and eliminate vertical or horizontal movement during transport.
- Our system also prevents swaying that a strap system may cause.
- Our stretcher support system is secured to the structure of the vehicle.
- We do not use a super structure that relies on suction cups on the roof or a framework that extends across the aisle, creating an impact hazard for care givers.
- Our system can handle NATO military style stretchers or standard patient stretchers.
- The full headroom rear door extension system allows caregivers to walk into the vehicle without having to duck under a low hanging rear door frame.
- We offer two styles of rear loading ramps: an aluminum ramp that conveniently stores under the vehicle or you can order a roll-up ramp.
